Hirani was selected to provide construction management services at all PANYNJ facilities.

Tasks include Construction Inspection of structural steel, structural concrete, asphalt and concrete paving, painting of structural steel, electrical and mechanical; Construction Contract Administration; Constructability Review; Cost Engineering; and estimating.

Electrical System Rehabilitation of the PATH System Station, Yards and Tunnels

Hirani's responsibilities are for coordinating and inspecting work of numerous contractors working on the PATH rail system. Project inspection included the rehabilitation of electrical power and lighting equipment, system upgrades for alarm and communication equipment, and site work at PATH stations, rail yards and tunnels, and the supervision of the installation of electrical cable in all PATH tunnels. Construction contracts in use included lump sum, unit price and cost plus. Responsible for determining acceptable quantities and estimates for payments to contractors. Determine schedule progress using Primavera and Expedition. Prepare progress reports.

Safety Engineering Inspection Services.

Hirani is providing safety engineering inspection services reporting directly to the engineer of construction for tunnels, bridges and terminals in the Construction Management Division. Safety inspection is being provided for construction projects at the following locations: George Washington Bridge, LaGuardia Airport, Port Authority Bus Terminal, JFK Airport, Goethals Bridge, Outerbridge Crossing, Lincoln Tunnel, Holland Tunnel, Newark Airport and the PATH Ferry.

Office Engineering Services

Hirani personnel are providing office engineering services for general construction contracts administered at the Port Authority technical services facility at 241 Erie Street, Jersey City, NJ.
